

Community Outpatient Clients Not Hospitalized by RSN.

Operational Definition: Percent of clients who received outpatient services and were not hospitalized in any setting in a Fiscal Year by RSN.

Operational Measure: The number of clients who received outpatient services and who were not hospitalized in any setting in a Fiscal Year divided by the total number of clients who received outpatient services in a Fiscal Year by RSN.

Formulas:

Number of clients who received outpatient services in Fiscal Year and were not hospitalized in a SH,CH,CLIP Facility, or E&T at any time during Fiscal Year by RSN

Number of clients receiving community outpatient services in Fiscal Year by RSN

Discussion: The majority of outpatient service recipients do not use any of the hospital alternatives. There is very little variation across RSNs and this indicator remains fairly stable over time, because only a very small number of clients use inpatient services. However, across the 3 fiscal years there is a slight increase in the number of clients not hospitalized.

Data Notes:

- The count of people receiving outpatient services includes clients who receive any outpatient services whether it was reported as an hour or a day of service
- RSN counts show the number of unduplicated clients within each RSN (i.e. a person is counted once in each RSN where they receive services).
- The State total is unduplicated across all RSNs (i.e. each person is only counted once in the Statewide total even though they can be counted in more than one RSN).
- Due to a data processing change data for Puget Sound Behavioral Health the number of people served in community inpatient settings for Pierce RSN are underreported in 2003 and 2004.
